<b>1</b>	<b>White box and Black Box</b>	2
1.1	White Box	2
1.2	Black box	2
<b>2</b>	<b>Unit, Integration, and System Testing</b>	2
2.1	Unit Testing	2
2.2	Integration Testing	2
2.3	System Testing	2
<b>3</b>	<b>Testing in isolation</b>	2
3.1	Stubs and Mocks	2
3.1.1	Stubs	2
3.1.2	Mock	2
3.2	Uses of each	2

## 1 White box and Black Box

### 1.1 White Box

- Internal structure known
- Emphasis on whether methods work correctly
- Requires programming and implementation knowledge
- Usually done internally
- Requires code access

### 1.2 Black box

- Used to test software without knowledge of internal structure
- Emphasis on the relationship between the **behaviour** of input and output
- Does not require programming and implementation knowledge
- Performed by end users and testers

## 2 Unit, Integration, and System Testing

### 2.1 Unit Testing

- Testing code in small isolated pieces
- Can be done anytime in the development process
- Is a *white box* strategy
- Done by developers

### 2.2 Integration Testing

- Repeating tests on a combination of larger collections of code units
- Done after unit but before system testing
- Uses both whitebox and blackbox testing
- Executed by testers

### 2.3 System Testing

- Testing the entirety of a developed system
- Done at the end of the development cycle
- Is blackbox
- Done by end users and developers

## 3 Testing in isolation

- The **seam** - boundary between the unit *being tested* and other classes that the unit collaborates with
- **Isolation** - All collaborating objects on the other side of the seam must be replaced by *mock* data

### 3.1 Stubs and Mocks

#### 3.1.1 Stubs

- The simulation of a real object with the *minimum* number of methods required for a test

#### 3.1.2 Mock

- Simulated objects that mimic the behaviour of real objects

### 3.2 Uses of each

- **Stub** - Used for *state verification*
- **Mock** - Used for *behaviour verification*
